Welcome to EBN Learn

Introduction

EBN Learn is your go-to resource for utilising [EBN Lab](#) and implementing the Evidence-Based Needs Process. It offers guidance and tools to help you capture, validate, and filter needs effectively. Working seamlessly with [EBN Lab](#), it provides a comprehensive Toolkit, including user guides and tools, for additional support whenever needed.

What are the 3 stages of the Evidence-Based Needs (EBN) Process?

Stage 1: Discover The first stage, **Discover**, focuses on capturing identified problems as Need Statements. Top-scoring Need Statements are then evaluated for progression to Stage 2.

Stage 2: Develop The second stage, **Develop**, involves engaging with stakeholders to gauge their satisfaction with existing solutions and the importance of addressing the Need. This reduces self-reference and bias in prioritising Need Statements.

Stage 3: Define The final stage, **Define**, ensures that prioritised Need Statements align with the organisation's requirements.

Want to know more?

- Find a high-level overview of each stage under [the 'Approach'](#) menu.
- Access step-by-step user guides for each stage under [the 'User Guides'](#) menu.
- Explore key Design Thinking and Innovation tools used in the process under [the 'Tools'](#) menu.
